

## QPAY CHECKOUT PAGE THE PAYMENT PAGE FOR E-COMMERCE

QPAY Checkout Page is the flexible payment page that you can easily adapt to your needs and your store. Benefits:

- ▶ PCI compliant payment page for e-commerce
- ▶ All established payment methods
- ▶ 3D Secure available for credit cards in 26 languages
- ▶ Merchant-specific layout
- ▶ Integrated risk management
- ▶ Connection to shopping cart systems and plugins available
- ▶ Interfaces with all established credit card acquirers and financial institutions

QPay Checkout Page is the ideal payment page for your webstore. Easy and fast to integrate, it is safe and convenient for you and your customers, processing all payments in real-time. QPay Checkout Page complies with the PCI standards for secure payment processing and can be incorporated into the look and feel of your webstore.

QPay Checkout Page stands for secure, flexible, easy and transparent payment processing. It provides all European payment methods in ONE solution. From credit cards and direct debits to online payments, mobile payments, alternate payment methods and industry-specific solutions.

A PCI compliant solution, QPay Checkout Page's appeal lies in its functionality and business process outsourcing. Shop plugins and connections to the leading shopping cart software make it easy to incorporate. QPay Checkout Page is available in 26 languages. Design your QPay Checkout Page payment page to reflect the look and feel of your webstore.

QPay Checkout Page enables you to define the payment processes

based on the requirements of your business model. It offers additional functionality such as immediate debit transactions or, as an alternative, separate authorization and debiting for credit cards. You can then automate these (e.g. end of business) or initiate them manually. Recurring and subscription payments as well as multiple debits with one authorization in the case of split delivery are just a few of the alternate processing methods available.

View all transaction data and processes on one online portal and initiate manual processes such as cancellations, direct debits and credits as well. Combine QPay Checkout Page with other Qenta interfaces, e.g. for back end processes.
